

# SIMPLY – ONLINE LEARNING SYSTEM

## **Abstract**

The online learning named as simply is a portal filled with live classes. With very profitable offer Classes and materials , in this project is to computerize the learning and the software will be user friendly, simple, fast and cost effective. This system is deployed to register and store user details and retrieve details as and when required and also to manipulate this detail meaningfully. The simply can be accessed by admin, Teachers and user by entering the login credentials the data are well protected for personal use and make the data processing very fast. And this project managing intranet activities such as leave, live class scheduling, Teachers and users management etc.

## **Modules**

### 1. User

- Login/Logout
- Registration
- Forgot/Change Password
- Email verification
- Attending classes
- View course
- Payment
- Purchase History
- Course Materials
- Feedback
- Update Password
- Update Profile

### 2. Teacher

- Login/Logout
- Time Scheduling
- Class Managing
- Leave Apply
- View Leave Status

- Update Password
- Update Profile

### 3. Admin

- Login/Logout
- Add/Delete/Update courses
- Manage User
- Manage Teachers
- Create Teachers
- Course Materials
- Manage Leave
- View Feedback
- View Payment History

### **Software Requirements**

- Front end: HTML, CSS, JavaScript
- Back end: PHP
- Database: MySQL

### **Technologies**

- Feedback Sentiment Analysis
- Chatbot
- Data Visualization
